

HIGH PRESSURE WATER

SWEEPING WITH HIGH PRESSURE

For an even better cleaning result with stubborn dirt, the sweepers from BROCK can also be equipped with high-pressure systems.

These systems are available in different variations, e.g. mounted as high-pressure spray bars in front of the vehicle across the entire vehicle width, can be swung out to the left and right, or fixed behind the roller brush under the vehicle or in conjunction with the surface extraction system for pore-deep road cleaning. Various manual spray guns with lance incl. hose drum are also part of the optional equipment.

The high-pressure water systems are available for both compact and large sweepers. Together with the BROCK experts, customers find the system suitable for their requirements and their type of sweeper.

N.B.: Some versions of this additional equipment at the front of the vehicle requires chassis preparation.

Technical changes reserved. All information without guarantee. Product photos may contain additional equipment.
